GC Capillary Columns Cross-Reference Guide

SCION Instruments offers high quality, reproducible GC capillary columns to meet the most demanding quality assurance specifications in the industry.

All columns are designed and tested to the tightest QC specifications for optimised column bleed, sensitivity and efficiency.

The below cross reference guide will make your conversion from a non-SCION column to a SCION column. Each section of this guide lists by phase selection, the suggested SCION column and the associated application areas. The below is not an exhaustive list of available GC columns but represents the most frequently used capillary columns.

Selecting Stationary Phase

Selecting the most appropriate stationary phase is dependent upon the polarity of the target analytes and the separation properties of the stationary phase:

	SCION-1 SCION-1MS	SCION-5 SCION-5MS	SCION-624MS	SCION-WAXMS	SCION-DHA
Polarity	Non-polar	Low to Medium	Medium	High	Non-polar
Separation Properties	Elution in boiling point order	Aromatic compounds retained by phenyl groups	Separation of isomers	Strong retention of polar compounds	Elution in boiling point order
Application	Gasoline and Solvents	Flavours, Environmental, Aromatics	Pesticides, PCBS, Oxygenates	Halogenated, Polar, Solvents	Gasoline and Solvents

Selecting Stationary Phase

The application type for each column are listed below.
