

Time for an Upgrade?

SCION Instruments world class GC range meets the demands of the older Varian 3800-GC

These models have long been replaced by our current 436-GC and 456-GC. Servicing and uptime for these models will become more challenging with age, which could potentially impact your business.

A great chance to ensure long-term flow of quality data that creates value for your organisation.

SCION Instruments is now offering the opportunity to replace these systems with a new 436-GC or 456-GC package in a great deal.

This offer includes:

- CompassCDS, our powerful Chromatography Data System software, and an extra kit of consumables.
- An Upgrade to the version included when using CompassCDS or GalaxieCDS legacy version.
- Extra consumable kits (vials, caps, crimper, column and magnifier) until supplies run out.

Please send us your GC serial number and we can supply an offer for a like-for-like replacement with the SCION performance and ease of use you have come to rely on.

Not in a position to replace right now? Contact us anyway! Service plans are available and we are happy to discuss how to keep your valued system running.
